

ALLOFUSE® DBM

ADVANCING THE NATURE OF BONE.

ALLOFUSE DBM GEL, PUTTY & PASTE

→ WHAT ARE ALLOFUSE & ALLOFUSE PLUS?

The AlloFuse DBM Gel, Putty and Pastes are unique bone graft substitutes designed to balance clinical efficacy, safety and ease of use.

- Since 2006, AlloFuse DBM has been implanted in over 130,000 spinal, orthopedic and other procedures for fusion and bone repair¹
- Every lot is tested to ensure the ability to grow new bone
- The reverse phase carrier is designed to provide excellent handling characteristics

AlloFuse Plus contains added ground cancellous bone.

→ WHY USE ALLOFUSE & ALLOFUSE PLUS? EASY AS 1–2–3.

1

Clinical Efficacy.

AlloFuse is clinically proven to be equivalent to autograft at growing new bone. Clinical and animal research agree – AlloFuse DBM is equivalent to autograft.^{2,3}

CLINICAL STUDY

*Use of Demineralized Bone Matrix Gel in Foot Surgery: A Prospective Randomized Controlled Study Comparing Demineralized Bone Matrix to Autologous Bone Graft.*²

Radiographs of successful subatarsal fusion (left) and tarsometatarsal fusion (right), both treated with AlloFuse DBM. Study showed no statistical difference when compared to autograft.

ANIMAL STUDY

*Demineralized Bone Matrix Provides Equivalent Results to Autograft in Standard Posterolateral Fusion Model in Adult Rabbits.*³

CONTROL

AUTOGRAFT

ALLOFUSE DBM

Three dimension reconstructed CT images show clear evidence of bone formation in both the autograft and DBM specimen. No bone formation appears in the control specimen. The study showed no statistical difference when compared to autograft.

2

Lot tested.

Variability in allograft tissue is always a concern as no two donors are alike, which is why we test every lot to ensure the ability to grow new bone. Many DBM products rely on *in vitro* assays to confirm osteoinductive potential for each lot. AlloSource utilizes a more highly regarded *in vivo* test to confirm osteoinductive potential.

3

Easy handling.

Our reverse phase carrier offers exceptional handling characteristics. At room temperature, AlloFuse is easily moldable. However, once AlloFuse reaches body temperature *in situ*, it stiffens to help stay in place.

→ ALLOFUSE CONFIGURATIONS

GEL

Injectable DBM Gel
1, 5 and 10 cc

PASTE

Injectable Plus Paste
1, 3 and 8 cc

PUTTY

1, 2.5, 5 and 10 cc DBM Putty
5 and 10 cc Plus Putty
